LEXICON

Exercises: Queries and updates

Use Python with the header from the code-along. Start by running python seed_webshop.py. Exercises 8 to 10 change data: run the seed script again when you are done.

The header (at the top of every Python file):

```
from pymongo import MongoClient

client = MongoClient("mongodb://localhost:27017/")
db = client["webshop"]
```

Exercise 1

Show the name and price of all products that cost more than 1000 kr.

Expected: 3 products

Exercise 2

Show all orders that are not delivered. Use $ne. Print the _id and status.

Expected: 8 orders

Exercise 3

Show customers who live in Stockholm or Malmö, using $in.

Expected: 3 customers

Exercise 4

Which products are white? Use dot notation.

Expected: 3 products

Exercise 5

Which products have the tag sport? Show only name and tags, without _id.

Expected: 3 products

Exercise 6

Show the 5 cheapest products, cheapest first. Only name and price.

Expected: 5 products

Exercise 7

Which orders contain product 2 (T-shirt White)? Hint: dot notation works on arrays of objects too: "items.product_id".

Expected: 4 orders

Exercise 8

Raise the price of all Accessories by 20 kr with $inc. Then print the Accessories with their new prices.

Expected: 4 products, each 20 kr more

Exercise 9

Add the tag "new" to the Rain Jacket without creating duplicates, and give it a field restock_date with today's date (use datetime.now()).

Expected: 1 product with the new tag and field (the time will be yours)

Exercise 10

Challenge: delete all orders with status new placed before 2026-03-20. Count them first. Hint: dates in filters are datetime objects, like datetime(2026, 3, 20).

Expected: 2, then 2 deleted
